

August 1, 2026

Dear Users of the Christ Church Facility,

Since 2003 Christ Church has been systematically removing legacy hazardous construction materials.

To date, the remediation process has resulted in the remaining legacy materials being limited to the asbestos-containing (ACM) walls and insulation of the Narthex, Chapel, and Chapel closet.

Christ Church recognizes that the remaining undisturbed ACM does not present an immediate threat to health and safety, no health risk in the normal, undisturbed state. Should the plaster be disturbed, leave the space immediately, close all doors and notify a member of the clergy staff, who will then inform the Buildings & Grounds Committee.

This acknowledgment letter serves to notify your organization of the remaining potential hazard. **It is very important that your authorized organization representative complete, sign and return this letter to the office.**

If you have specific questions, please contact the office at 603-772-3332 or office@christchurchexeter.org

Regards,

The Reverend Mark Pendleton
Rector
